

Memory Screening

A Closer look at Memory Changes

A **Memory Screen** is a wellness tool that helps identify possible changes in memory and cognition; it creates a baseline of where a person is at so that future changes can be monitored.

Free Memory Screens: Theresa Public Library, 290 Mayville St., Theresa
Wednesday, September 20, 12:30 - 4:00 p.m.

Administered by the Aging & Disability Resource Center of Dodge County staff

To schedule your appointment: Please call the Theresa Public Library at 920-488-2342, email tpl@monarchlibraries.org or stop at the library front desk to sign up..

Early detection is important

Get immediate results!

You may keep them for yourself and, if you request, we will fax them to your physician.

Early detection is important!

Just as blood pressure, cancer, diabetes, or stroke screening contribute to prevention and better treatments, so does a **Memory Screen**.

Treatment is possible!

Some types of dementia are reversible, like those caused by nutritional and vitamin deficiencies, depression, thyroid issues, and more.

Knowledge means you have more control!

Dementias that are not reversible can often be treated with medications that could slow down the progress and preserve quality of life for a longer period of time.

199 County Road DF, 3rd Floor, Juneau, WI 53039
